SUMMARY

AI Developer with 2+ years shipping production full-stack AI platforms across retail, fashion e-commerce, and financial reconciliation. Depth in large language model applications, Retrieval-Augmented Generation (RAG), and vector search. Sole-author published researcher.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS

Frontend and Backend: React, Next.js, Tailwind CSS, shadcn/ui, Recharts, FastAPI, Flask, Node.js, SQLAlchemy, Pydantic, REST APIs, Server-Sent Events

AI and Machine Learning: Claude API, Claude Agent SDK, OpenAI API, Gemini API, LangChain, Retrieval-Augmented Generation (RAG), hybrid and vector search, embeddings, cross-encoder reranking, prompt engineering, Model Context Protocol (MCP)

Databases: PostgreSQL, pgvector, Neon Postgres, MongoDB, Qdrant, Pinecone, Redis

Cloud and Tooling: Vercel, Render, Cloudflare Workers and Pages, Docker, Git, CI/CD, NextAuth, OAuth, JWT, Razorpay, Pytest, Playwright, Pandas

EXPERIENCE

AI Developer, Glassbox Ventures, Mumbai, India (05/2025 to Present)

GBHunt, Market Intelligence and Business Development Platform

- Built and deployed a production market-intelligence platform (Next.js 16, TypeScript, Neon Postgres, OpenAI API) used daily by the business-development team, with a pipeline that scrapes and LLM-classifies market signals, matches each to tracked clients or competitors, and auto-drafts outreach emails; scaled to 40,000+ classified records.
- Designed an 11-stage AI agent lifecycle producing intelligence briefs, pitch decks, and proposals with human review gates and a full audit trail; secured it with NextAuth and Microsoft Entra ID across 5 roles and 8 capabilities.

Ainaa, AI Fashion E-Commerce Platform

- Designed and deployed a luxury AI fashion e-commerce platform (Next.js 16, React 19, FastAPI, Python 3.11, Claude Agent SDK, MongoDB Atlas, Qdrant) with a conversational stylist using SSE streaming, long-term preference memory, and MCP tool integrations.
- Implemented semantic and visual product search combining Qwen-3 embeddings, FashionCLIP image similarity, and cross-encoder reranking; delivered 175+ automated tests at 100% critical-path coverage and sub-500ms p95 latency.

The Souled Store Finance Platform, Payment Reconciliation and Analytics

- Architected an enterprise reconciliation platform for 48+ retail stores (Next.js 16, FastAPI, SQLAlchemy, PostgreSQL, Docker), matching sales, settlements, and bank deposits across 5 payment modes with T+1 settlement tracking.
- Automated reconciliation of 40,000+ orders and 128,000+ line items monthly from 100 MB+ Excel workbooks, cutting daily processing from 2 to 3 hours down to 5 minutes and error rates from 4% to under 0.1%; generated approximately INR 2.4 lakh in revenue.

The Kranti Cookbook (kranticookbook.com), Retrieval-Augmented Generation Application

- Shipped a production RAG application (Next.js 16, TypeScript, Pinecone, Gemini API, Claude API) with two-stage retrieval over a 199-recipe vector index, lifting Recall@1 from 88% to 97% at 0.984 MRR on a 36-query gold set.

Software Developer Intern, Augle AI, Mumbai, India (05/2024 to 05/2025)

- Developed a RAG chatbot (LangChain, PromptLayer, OpenAI API) serving real-time answers from a knowledge base of 5,500+ product records across 6 categories; built and normalized the Scrapy data pipeline and integrated the model into a React.js frontend.

PUBLICATIONS

How Many Tries Does It Take? Iterative Self-Repair in LLM Code Generation Across Model Scales and Benchmarks (arXiv:2604.10508)

- Sole author. Evaluated iterative self-repair across 7 large language models, showing gains of +4.9 to +17.1 percentage points on HumanEval and +16.0 to +30.0 on MBPP Sanitized, at up to 54% token savings versus independent resampling.

PROJECTS

Askably (askably.xyz), White-Label AI Support Agent for Any Website

- Built and launched a live multi-tenant SaaS (FastAPI, Python 3.12, Next.js 16, PostgreSQL with pgvector, Redis, Docker) where a business uploads documents or points at its site, brands every pixel, and embeds a 3.2 KB gzipped widget with one line of HTML.
- Engineered hybrid retrieval fusing pgvector HNSW and Postgres full-text search with Reciprocal Rank Fusion, a cosine-similarity grounding gate that refuses off-topic questions at zero token cost, and a semantic answer cache serving repeats in 12ms at roughly \$0.0002 a message.
- Shipped auth, plan gating, usage metering, rate limiting, origin-scoped visitor tokens, SSRF-hardened crawling, and subscription billing behind 900+ backend tests at 100% statement coverage enforced in CI.

PDFPipe (pdfpipe.xyz), HTML-to-PDF Developer API

- Built and launched a live developer SaaS API converting HTML or a URL into production-quality PDFs on Cloudflare Workers with Browser Rendering and D1, with API key issuance, usage metering, quota headers, rate limiting, and SSRF-hardened rendering.
- Published and maintain the client ecosystem: a Python SDK on PyPI, an MCP server on npm for AI agents, and an n8n community node, plus the marketing site, docs, and keyless playground.

ToolBox (toolbox-kit.com), Privacy-First Developer Tools Platform

- Built and maintain 172+ browser-based tools (Next.js, TypeScript, Tailwind CSS) where all processing runs client-side, with a Pro tier running on-device AI inference through WebLLM and WebGPU; approximately 1,000 monthly organic visitors at zero paid spend.

EDUCATION

Bachelor of Science in Artificial Intelligence and Machine Learning (2022 to 2025), Nagindas Khandwala College, University of Mumbai, Mumbai, India
