TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, HTML, CSS, SQL
- **Frameworks:** React, Next.js, FastAPI, Flask, Tailwind CSS, SQLAlchemy, Pandas, Recharts
- **AI and ML:** Claude API, Claude Agent SDK, OpenAI API, LangChain, XGBoost, TensorFlow, Qdrant Vector DB, FashionCLIP
- **Tools:** Git, GitHub, PostgreSQL, MongoDB, Docker, Cloudflare Pages, Vercel, Render, Jupyter, Power BI, Tableau

EXPERIENCE

AI Developer, Glassbox Ventures

05/2025 - Present

Foo Restaurant Analytics Platform

- Built full-stack analytics platform (React 19, FastAPI, PostgreSQL) for restaurant chain with 14+ outlets, delivering 100+ interactive visualization cards across 11 analytics pages covering sales, customer segmentation, and menu optimization.
- Integrated Claude AI natural-language queries with streaming responses and XGBoost predictive forecasting (6-month horizons with confidence intervals); deployed on Render and Vercel with 5-minute response caching.

Muse AI Fashion E-Commerce

- Designed and deployed luxury fashion platform for Indian shoppers using Next.js 16, FastAPI, Claude Agent SDK, and Qdrant vector DB with 1024-dim Qwen embeddings and FashionCLIP visual similarity matching.
- Achieved 100% test coverage (175 tests) and sub-400ms API response times; integrated Google OAuth, Razorpay payments, and real-time SSE streaming chat.

The Souled Store Finance Platform

- Architected enterprise reconciliation platform for 60+ retail stores, automating 40,000+ daily orders across 5 payment modes (UPI, Card, AMEX, Cash, District App) with T+1 settlement (Next.js, FastAPI, PostgreSQL).
- Cut processing time from 2 to 3 hours down to 5 minutes and error rates from 4% to under 0.1%; drove approximately Rs. 4.6L in project revenue; designed to scale to 200+ stores.

Software Developer Intern, Augle AI

05/2024 - 05/2025

- Developed Retrieval-Augmented Generation (RAG) chatbot using LangChain, PromptLayer, and OpenAI API, serving real-time answers from a knowledge base of 2,000+ scraped product details.
- Scraped and normalized product data with Scrapy, engineered prompts for response quality, and integrated the model into a React.js frontend.

PUBLICATIONS

How Many Tries Does It Take? Iterative Self-Repair in LLM Code Generation Across Model Scales and Benchmarks (arXiv:2604.10508)

- Sole author. Evaluated iterative self-repair across seven LLMs on HumanEval and MBPP, showing universal pass-rate gains of 4.9 to 30.0 percentage points and up to 54% token savings versus independent resampling.

PROJECTS

ToolBox (toolbox-kit.com)

- Built and maintain privacy-first developer platform with 165+ browser-based tools (Next.js, TypeScript, Tailwind CSS); all processing runs client-side. Sustains approximately 1,000 monthly organic visitors, deployed on Cloudflare Pages with PWA offline support and JSON-LD structured data.
- Implemented Pro tier with on-device AI via WebLLM and WebGPU and BYOK support for OpenAI and Anthropic APIs, eliminating server-side inference costs and preserving user privacy.

EDUCATION

B.Sc. AI and ML, Nagindas Khandwala College (Mumbai University)

2022 - 2025
